

# Android Studio and/or Xcode is no longer required

- Single command to build a standalone app in the cloud

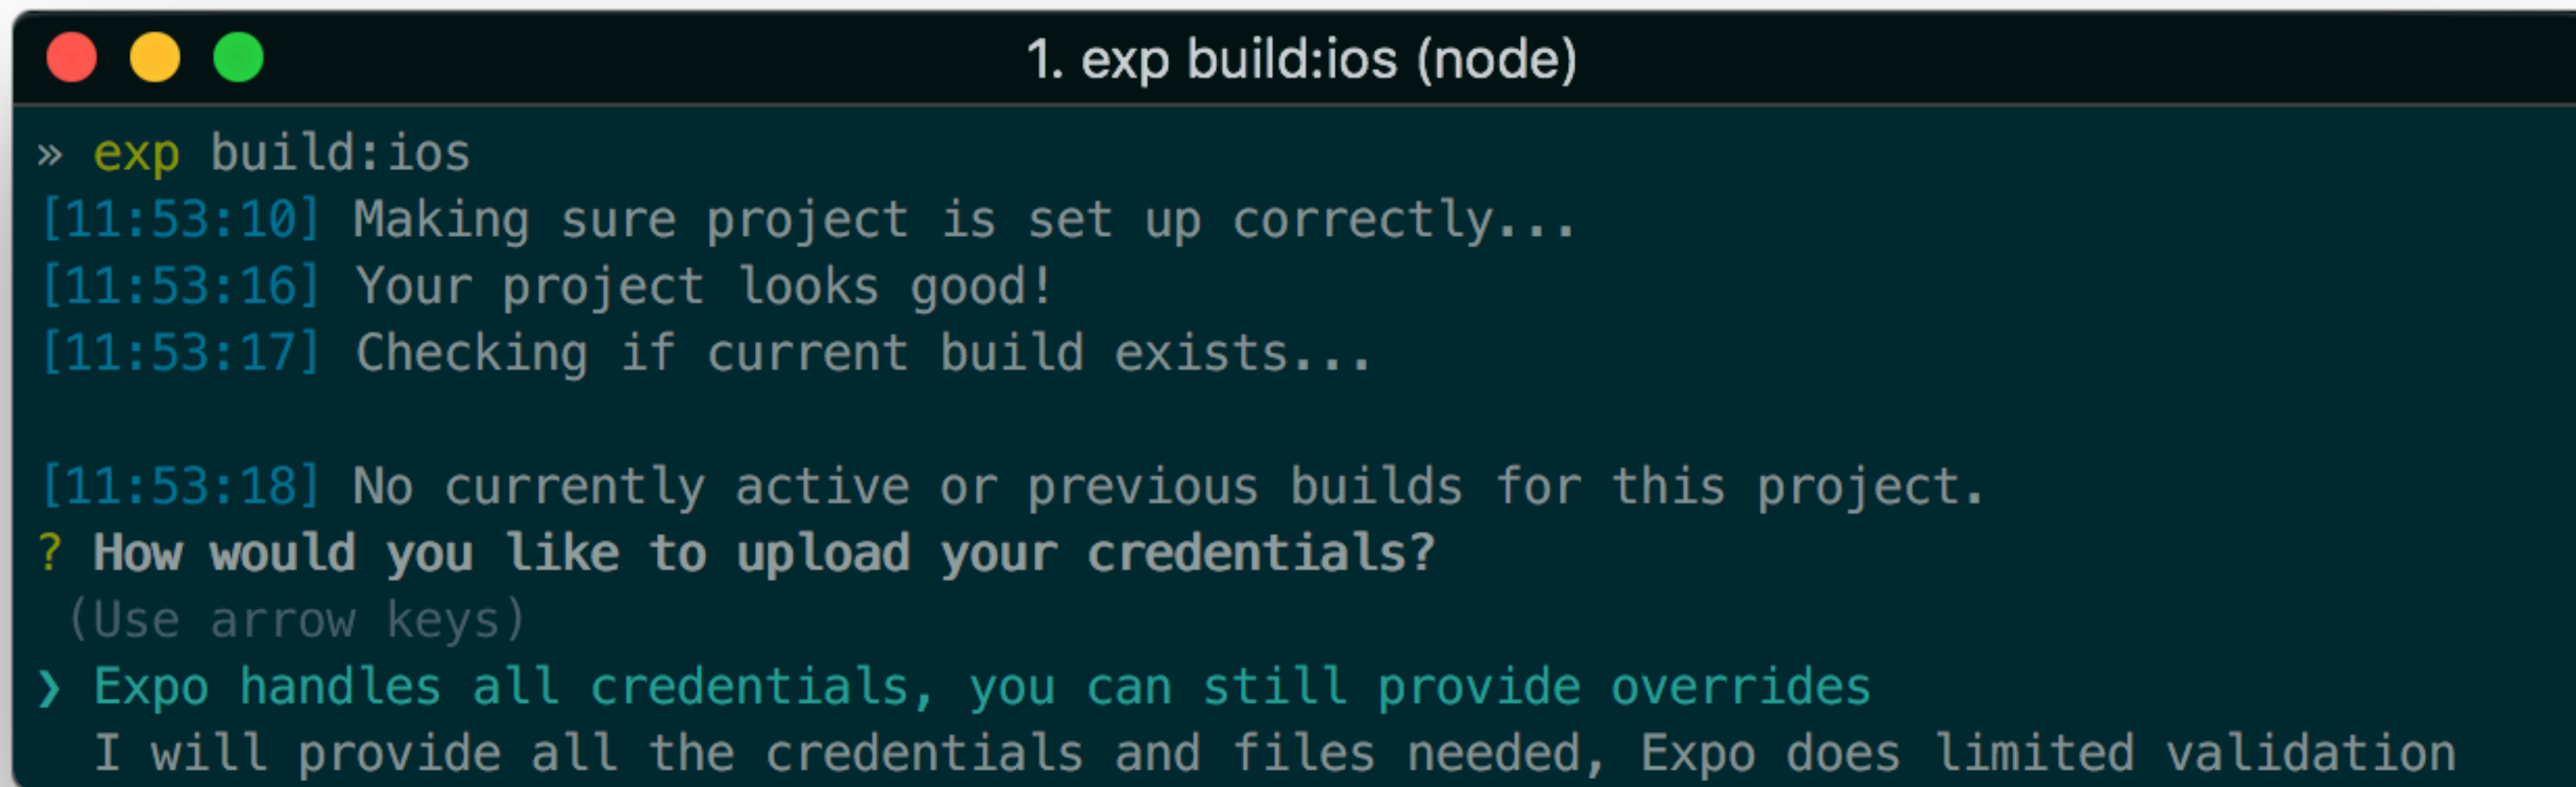

```
1. exp build:ios (node)
> exp build:ios
[11:53:10] Making sure project is set up correctly...
[11:53:16] Your project looks good!
[11:53:17] Checking if current build exists...

[11:53:18] No currently active or previous builds for this project.
? How would you like to upload your credentials?
  (Use arrow keys)
> Expo handles all credentials, you can still provide overrides
  I will provide all the credentials and files needed, Expo does limited validation
```

# Easy deploy with auto-generation of signature certificates and keys

- Expo prompts you how would you like to upload your credentials?
- Or simply publish your app and open via QR-code (Android only)

A terminal window with a dark background and light text. The title bar shows three colored circles (red, yellow, green) and the text "1. exp build:ios (node)". The terminal output shows the command "exp build:ios" being executed, followed by several status messages and a prompt asking how to upload credentials. The user selects the option "Expo handles all credentials, you can still provide overrides".

```
1. exp build:ios (node)
» exp build:ios
[11:53:10] Making sure project is set up correctly...
[11:53:16] Your project looks good!
[11:53:17] Checking if current build exists...

[11:53:18] No currently active or previous builds for this project.
