

Over-the-air updates with release channels out of the box

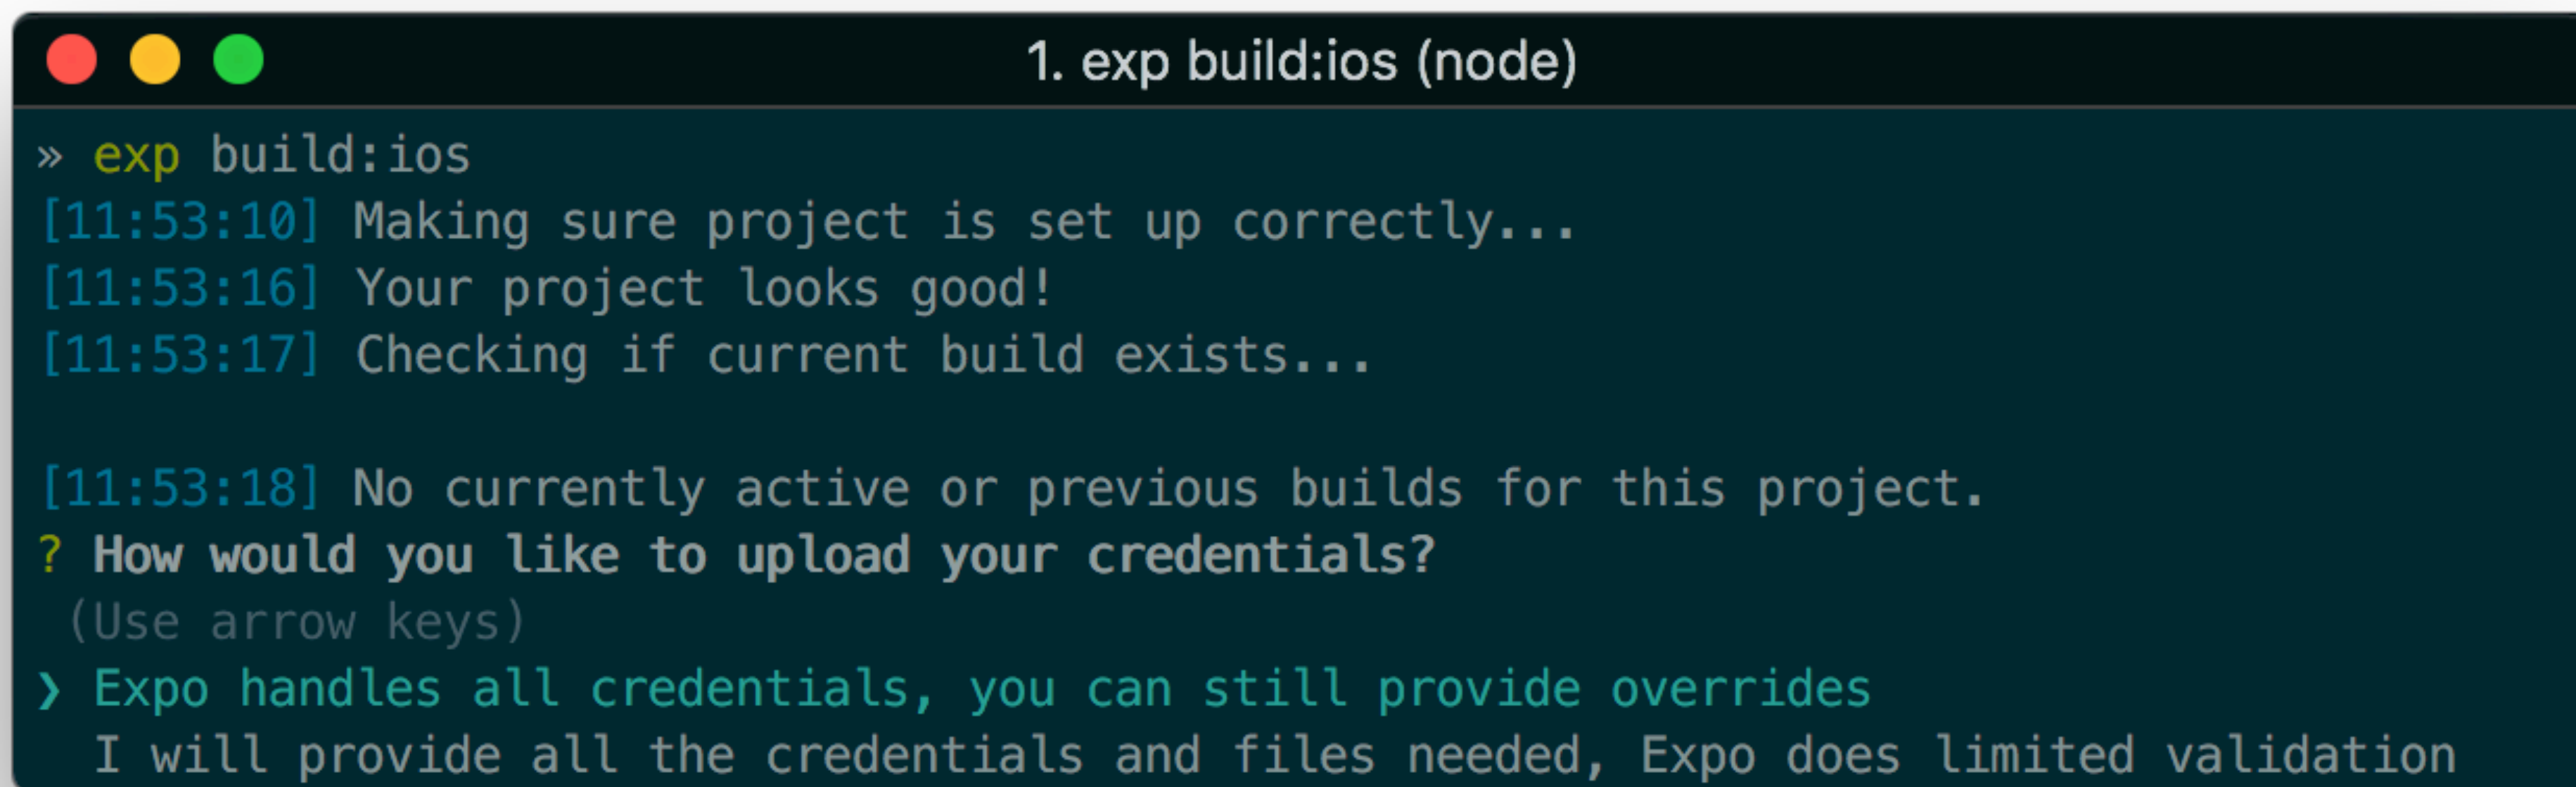

- Deploy updates using a single command

```
1. terry@Terrys-MBP: ~/LifeWithExpo (zsh)
~/LifeWithExpo
» exp publish --release-channel production
[11:50:24] Unable to find an existing exp instance for this directory, starting a new one...
[11:50:34] Starting Metro Bundler on port 19001.
[11:50:34] Metro Bundler ready.
[11:50:36] Tunnel ready.
[11:50:36] Publishing to channel 'production'...
[11:50:41] Building iOS bundle
[11:50:56] Building Android bundle
Building JavaScript bundle [=====] 100%
[11:50:56] Finished building JavaScript bundle in 14490ms.
[11:51:08] Analyzing assets
Building JavaScript bundle [=====] 100%
[11:51:08] Finished building JavaScript bundle in 12098ms.
[11:51:19] Finished building JavaScript bundle in 11150ms.
[11:51:30] Uploading assets
Building JavaScript bundle [=====] 100%
[11:51:30] Finished building JavaScript bundle in 10755ms.
[11:51:30] No assets changed, skipped.
[11:51:30] Uploading JavaScript bundles
[11:51:43] Published
[11:51:43] Your URL is
https://exp.host/@terrrysahaidak/lifewithexpo?release-channel=production
```

Android Studio and/or Xcode is no longer required

- Single command to build a standalone app in the cloud

```
1. exp build:ios (node)
> exp build:ios
[11:53:10] Making sure project is set up correctly...
[11:53:16] Your project looks good!
[11:53:17] Checking if current build exists...

[11:53:18] No currently active or previous builds for this project.
? How would you like to upload your credentials?
  (Use arrow keys)
> Expo handles all credentials, you can still provide overrides
  I will provide all the credentials and files needed, Expo does limited validation
```
